

# DANGER

## Hazardous waste Hazardous to your health

If it's flammable, explosive, corrosive or toxic  
It's bad for you and our environment

## DON'T TIP IT OUT

### Examples of Hazardous Waste:

- poisons
- paints
- ag chemicals
- e-waste
- fuel
- industrial chemicals
- household chemicals
- solvents

**the list is long**

Some hazardous waste can be recycled. Donate leftover paint to a local school or marae. Could a neighbour or friend make use of that leftover garden chemical you no longer need?

Unfortunately hazardous waste isn't accepted at the Waitomo District Landfill. Check the label for info on how to dispose of waste correctly. Got a question about hazardous waste? Just call Waitomo District Council on **07 878 0800**.

**Respect our environment. Please.  
We'll all be better off.**
